

Project Brief: NZQA Unit Standard 29776

Use the main features of an HTML editor to create a website

Level: 2 | Credits: 4

1. The Scenario

You are a web developer creating a site or an html game (or your chosen client). You must build a professional, multi-page website using code in an HTML editor (e.g., Notepad++ or VS Code) and deploy it to a server.

Your Goal: Create a valid, accessible website that meets all specifications below and demonstrates effective use of your HTML editor's features.

2. Technical Requirements

To pass this standard, your website must include:

A. Structure & Content (HTML5)

- **Minimum 3 Linked Pages:** for example Home, About/Menu, Contact.
- **Semantic Tags:** Use HTML5 structural elements (<header>, <nav>, <main>, <section>, <article>, <footer>). Do not rely solely on generic <div> tags for layout.
- **Metadata:** Include a valid <!DOCTYPE html> declaration and <meta> tags (charset, viewport, description) in the head of every page.
- **Navigation:** A site navigation menu must appear on every page to allow users to move between pages easily.

B. Styling & Enhancements (CSS3)

- **External CSS:** Use a separate .css file for styling.
- **Responsive Design:** The site must look good on mobile, tablet, and desktop
- **Interactivity:** Use CSS transitions or animations (e.g., hover effects on buttons, smooth scrolling).
- **Enhancements:** You must include at least two of the following specific enhancements:
 1. **Tables:** Used effectively (e.g., to display menu prices or opening hours).
 2. **Lists:** Ordered () or Unordered () lists used for content organization.
- **Formatting:** Apply CSS styles for container width, text alignment/wrapping, borders, and fonts.

C. Media & Links

- **Media Elements:** Embed at least two media elements (e.g., images using `<img>` with alt attributes; or audio/video).
- **Hyperlinks:** All internal links must work. Include at least one external link to a relevant resource.

3. HTML Editor Skills Checklist

Important: Your assessor will observe you performing these tasks in your editor (e.g., Notepad+). Ensure you use the following features during development:

- **Navigation & Display:** Use shortcuts, adjust zoom/screen wrap, and use the "Find" tool.
- **Code Editing:** Demonstrate moving, copying, inserting, and deleting code snippets. Use **Undo/Redo** and **Find & Replace**.
- **Data Entry:** Add metadata (title/description) and content data to your pages.
- **Previewing:** Preview your work in at least two different browsers during the build process.

4. Accessibility Requirements (W3C Compliance)

Your website must be usable by people with disabilities. You must include:

- **Alt Text:** Descriptive alt attributes for all images.
- **Color Contrast:** Ensure text is readable against the background (use a tool like WebAIM Contrast Checker).
- **Keyboard Navigation:** Users should be able to tab through links and form fields logically.
- **Focus States:** Visible outlines when navigating with the keyboard.

5. Testing & Evaluation Plan

You must complete these steps before submitting:

1. **Testing:** Test your site in two web browsers. Check for broken links, image alignment issues, and table formatting errors. Document any errors found using a testing plan (provided by teacher).
2. **Evaluation:** Evaluate the site against the brief: Is it fit for purpose? Does it appeal to the target audience?
3. **Changes Log:** Record any changes you made based on your evaluation/testing. If no changes were needed, state that clearly in your log.

6. Deployment & Submission

- **File Management:** Save all files (HTML, CSS, Images) into a logically named folder structure (e.g., `Project_Name/index.html`, `css/style.css`).

- **Publishing:** Upload the entire website folder to a web server.

Layout and Design Tips

Element	Recommendation
Fonts	Use clean, readable fonts like Arial, Verdana, or Helvetica
Font Size	Body text: 14-16px; Headings: 18-24px
Colors	Use a simple color palette with good contrast (e.g., dark text on light background)
Images	Use high-quality, relevant images with captions and credits
Navigation	Keep navigation consistent and visible on all pages
Mobile Friendly	Ensure layout adapts well to smaller screens
Accessibility	Use alt text for images and ensure keyboard navigation
Links	Clearly distinguish links with color or underline
Multimedia	Use sparingly and ensure they enhance understanding, not distract
