

Bob West from West's Computing wants to create a small game review site for popular computer games that will, hopefully, attract more attention to his core business of selling and installing computer hardware.

He plans to place advertisements for computer hardware that improve the games performance on each page which, he hopes, will encourage gamers to buy that hardware from West's Computing.

He has decided to employ you, as someone knowledgeable about web design and computer games, to help him test the idea by creating a simple site which consists of a landing page and a single game summary page. If it works and he likes the result he will continue to get additional reviews of current games added to the site along with other topics of interest. The game he has chosen to demonstrate the site is *The Elder Scrolls V: Skyrim Special Edition*.

He wants the site to appeal to computer gamers who also have money to spend on expensive hardware, so he wants it to look "sleek" and "high-tech" without being too cluttered. Bob also wants the site to use modern web design practices and wants you to properly separate the pages content from its presentation.

Bob wants to have a lot of control over the project. He will provide you with many of the materials necessary and will provide you with a design to ensure he achieves his desired result.

However he is concerned about copyright infringement so he requires that you follow the "fair use" exceptions under copyright law and fully acknowledge the original author, studio and/or publisher.

Once the site is completed, Bob wants you to check the site for errors using the W3Schools web page validation tools and test it works correctly using the at least two different web browsers (e.g. Chrome and Firefox) and at least one mobile device.

Once he is sure everything is correct and all problems are fixed, he will sign the project off.

Website plan

Bob has a clear Idea about what he wants each page to be, both on mobile (900px or smaller) and desktop (greater than 900px) screens.

- Use the site logo to help decide on your colour scheme. Your scheme should incorporate or be complimentary to these colours. They are:
 - Text: #FFF6F4
 - Background: #166678
 - Highlight: #7DB9B3
- The fonts must be:
 - Body: <https://fonts.google.com/specimen/Quicksand>
 - Headings: <https://fonts.google.com/specimen/EB+Garamond>
 - In addition, Font Awesome is used for the email and facebook logo: <https://fontawesome.com/start> (The HTML Element to use font awesome in your document is `<link rel="stylesheet" href="https://site-assets.fontawesome.com/releases/v6.5.2/css/all.css">` and must be included in your documents `<head>` element.)
- The site must work on both desktop and mobile using a responsive layout. To keep the task (relatively) simple, you only need to design the site to work with two sizes: 0 - 900px and 901 and greater.

Site wide specifications

Bob as a list of specifications that must be met on every page before he will sign the site off.

The website must

- Be stored in a main folder called: your_name_westscomputing. For example: bob_gilmore_westscomputing.
- Have a sub folder for CSS.
- Have a sub folder for images.
- Have files stored in the correct folders.
- Include two web pages: Landing page (index.html) and a game review page.

- Include an [XML site map](#) for indexing by search engines.

All pages must:

- Include an appropriate <title>, including the words: Wests Computing
- Include <meta> elements for charset, viewport, author and keywords.
- Use appropriate file names. The landing page must be named: index.html
- Use the same colour scheme. The colour scheme should consist of at least three colours and no more than four. Different shades of the same colour may be used to allow for more variety.
- Use the same font set, consisting of no more than three different fonts.
- Share the same core structural elements:
 - A <header> containing the Wests Computing logo and contact details. As we have no real Facebook page, just link to the Facebook home page at <http://facebook.com>. For the email, use email@fakeaddress.com.
 - A <nav> block containing hyperlinks to the following sites:

The site landing page: index.html

The Steam Store: <http://store.steampowered.com/>

The Good Old Games store: <https://www.gog.com/>

- The pages main content should be contained in an appropriate element, such as <div> or <section> element.
- The pages marketing content should also be contained in an appropriate element, such as <div> or <section> element. This must be separate from the main content
- A <footer> containing copyright information and the date the site was created as shown below:

© Current Year Wests Computing and Your Name.

For example: © 2019 Wests Computing and Bob Gilmore.

All images must:

- Include an alt attribute.

All tables must:

- Include a <caption> element to describe the table for indexing by a search engine.

Marketing:

The plan should include room for two marketing slots. You can choose two games to market from those slots.

Completion requirements:

Landing page specifications

In addition to the site wide requirements, the website landing page must include the following:

Page Heading

- Use the following text for the main heading.

Welcome to Wests Computing.

Main content

- Use the following text as the main paragraph.

Welcome to Wests Computing game reviews. Here you'll find information about all the hottest game titles as well as help getting the best hardware for your gaming experience!

Article

The demonstration article is dedicated to *The Elder Scrolls V: Skyrim Special Edition*.

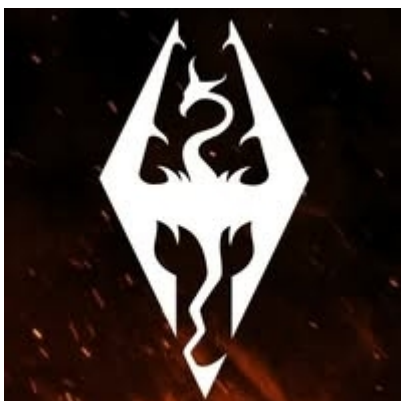

Heading

- Use the following heading:

The Elder Scrolls V: Skyrim Special Edition

Image

- Use the following box art.

Text

- Use the following text.

Winner of more than 200 Game of the Year Awards, Skyrim Special Edition brings the epic fantasy to life in stunning detail. The Special Edition includes the critically acclaimed game and add-ons with all-new features like remastered art and effects, volumetric god rays, dynamic depth of field, screen-space reflections, and more. Skyrim Special Edition also brings the full power of mods to the PC and consoles. New quests, environments, characters, dialogue, armour, weapons and more – with Mods, there are no limits to what you can experience.

Links

- Both the box art and heading should link to a Skyrim game page that you will complete.

Metadata

- The keywords for this page should include: *Wests Computing, Skyrim, Logitech, Nvidia*

Skyrim game specifications

In addition to the site wide requirements, the Skyrim game page must include the following.

Heading

- The full name of the game.

Text

- Use the following text.

Captured trying to cross the border, you are sentenced to death only to be saved at the last moment when a legendary dragon attacks the keep of Helgen.

Embarking on an epic quest, you must attempt to learn more about the dragons, take sides in a bitter civil war and learn more about the mysterious dragonborn.

Skyrim provides the players with endless opportunities to explore and play in the huge virtual world of Skyrim. Five cities, expanses of wilderness and mountains and forbidding dungeons await the intrepid explorer.

Images

- Include at least 2 images that promote skyrim

System requirements

- Use a table as shown in the plan to display the following information.

	Minimum	Recommended
CPU	Intel i5-750/AMD Phenom II X4-945	Intel i5-2400/AMD FX-8320
GPU	NVIDIA GTX 470 1GB /AMD HD 7870 2GB	NVIDIA GTX 780 3GB /AMD R9 290 4GB
RAM	8 GB RAM	8 GB RAM
Hard Disk Space	12 GB available space	12 GB available space

Links

- Links to the Skyrim home page and Skyrim meta critic review must be included.

Copyright

- In the footer, add the following in addition to the exiting copyright information.

Skyrim © 2016 Bethesda Softworks LLC, a ZeniMax Media company. The Elder Scrolls, Skyrim, Bethesda, Bethesda Game Studios, Bethesda Softworks, ZeniMax and related logos are registered trademarks or trademarks of ZeniMax Media Inc. in the U.S. and/or other countries. All Rights Reserved.

Metadata

- The keywords for this page should include: *Wests Computing, Skyrim, Logitech, Nvidia*

Testing Plan

1. Use the W3C HTML validator, <http://validator.w3.org/> to check your HTML code for errors. Use the "Direct Validation" option to prove your pages are

accessible from the Internet. Make any fixes or changes recommended by this tool and keep retesting until no errors are reported. Provide a screen shot for both pages showing a successful test and the page addresses as evidence.

2. Use the W3C CSS validator, <https://jigsaw.w3.org/css-validator/>, to check your CSS for errors. As above, make any fixes or changes recommended by this tool and keep retesting until no errors are reported. Provide a screen shot showing a successful test and the CSS address as evidence.

3. Once the pages pass the validators, test the pages in **two** modern desktop web browsers, such as Chrome, Edge or Firefox. Fix any issues that arise in the different browsers and keep retesting until no issues are apparent.

Look for the following issues:

- Readability / legibility. Is all the text readable with good contrast between foreground and background?
- Formatting and layout. Does everything behave as expected in both browsers? Are all elements correctly positioned on the page? Does everything fit nicely with no overflow, overlapping elements or text, etc.
- Spelling. Check for any spelling errors.

Take a screen shot of each page in both browsers, clearly showing the browser window, for use as evidence.

4. Test the pages in a modern mobile web browser such as Chrome, Safari or Firefox on a Mobile Device (a phone or tablet). Fix any issues that arise and keep retesting until no issues are apparent.

Look for the same issues noted above.

Take a screen shot of each page for evidence. If you do not have access to a mobile device, ask your assessor for assistance.

5. Check that all internal and external hyper-links work correctly.

Internal: Home page link, two links to Skyrim page; heading and box art.

External: Email, Facebook, Steam, GoG, Logitech, Nvidia.
